# Welcome

Welcome to Prisma Cloud Compute Edition.

Prisma Cloud Compute is a cloud workload protection platform (CWPP) for the modern era. It offers holistic protection for hosts, containers, and serverless deployments in any cloud, and across the software lifecycle. Prisma Cloud Compute is cloud-native and API-enabled. It can protect all your workloads, regardless of their underlying compute technology or the cloud in which they run

---

# Releases

In general, you should stay on the latest major release unless you require a feature or fix from a subsequent maintenance release. We recommend that you upgrade to new major releases as they become available.

The bell icon in Console automatically notifies you when new releases are available:

## Downloading the software

Download the software from the Palo Alto Networks [Customer Support portal](#).

*If you don't see **Prisma Cloud Compute Edition** in the drop-down list, contact customer support. They'll send you a direct link to the download. We are currently working on fixing all accounts that have this issue.*

**STEP 1** | Log into the [Customer Support portal](#).

**STEP 2** | Go to **Updates > Software Updates**.

**STEP 3** | From the drop-down list, select **Prisma Cloud Compute Edition**. All releases available for download are displayed.

## Software Updates

Please Select:

Prisma Cloud Compute Edition

# ***Install***

Prisma Cloud can be deployed to almost any environment. The guides in this section show you how to deploy Prisma Cloud to a variety of on-prem and public cloud environments.

- > [Getting started](#)
- > [Install agent](#)
- > [Install variations](#)

---

# Getting started

Defender protects your environment according to the policies set in Console.

## Downloading the software

Prisma Cloud Compute Edition software can be downloaded from the Palo Alto Networks Customer Support portal. For more information, see [here](#).

## Install guides

Start your install with one of our dedicated guides.

---

# Install agent

The agent protects your host.

STEP 1 | Do this

STEP 2 | Do that

---

# Install variations

This section shows you how to install the agent in different environments.

## GCP

Install on GCP.

### *Install on GCP*

Install with a curl-bash script.

[STEP 1](#) | Step 1.

[STEP 2](#) | Step 2.

## Variation 1

Another subdir.

### *On-prem variation*

This is the on-prem variation.
